

# Tool for Deploying the TeamMentor to the Cloud.rtf

Tool to automatically create/deploy new versions of TeamMentor (with different databases) to AmazonEC2 images:

Once there is an EC2 server configured (which is done with the Prepare Server for Deployment)

Select the database to use (at the moment there are 4 options: **Empty Database**, **Original\_SI\_Content**, **TM ASPNET 4.0**, **TM OWASP**)

**Tool - TeamMentor Remote Deployment Tool**

New Deployment Settings

Server IP address: 204.236.160.49

Server Username: administrator

Server Password: DvGfc7hbtbd

Server WCF Listening Port: 9554

Server WCF Server ID: remote

New Deployment ID: Live\_Test

SQLSever Address: \EC2SQLEXPRESS

☐ Deploy Team Author client app to server

Database to use: Original\_SI\_Content

Prepare server for deployment

Execute Deployment Sequence (and create new TM instance)

☐ OnlyUnzipFiles

Connect to Server via RDP

Created T url: http://

Applic

Folder bfe3-9
